

Setting up Video and Social Media feed with Juicer

Last Modified on 26/06/2023 4:23 pm AEST

If your organisation wishes to set up a VIDEO (YOUTUBE) feed and/or a SOCIAL MEDIA feed for your website then you need to do so via JUICER.

Juicer helps to aggregate all of your brands' hashtag and social media posts into a single, beautiful social media feed on your website, allowing you to easily moderate and curate your content.

Admins need to create a JUICER account and link their social media and/or video (youtube) accounts. These need to be created separately within Juicer as these are different page panels within your website so will need a unique code which can be input into the relevant page panel. Organisations can set up Juicer for free (with paid options if needed) via the [Juicer website](#).

Once the feeds have been set up they need to make note of the **JUICER SHORTCODE** created within Juicer which they can input into the relevant page panel.
